📘 INDUSTRIAL INTERNSHIP REPORT on

"Quiz Game Using Python"

Prepared by

Tarun Pardeshi

Executive Summary

This report provides details of the Industrial Internship provided by Upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt. Ltd. (UCT).

This internship was focused on a project/problem statement provided by UCT. We had to complete the project along with the report within a duration of 6 weeks.

My project was "Quiz Game Using Python", which is an interactive console-based application designed to test users' knowledge through multiple-choice questions. The system reads questions from a file, displays them to the user, accepts answers, evaluates performance, and calculates the final score. It also includes advanced features such as

category selection, timer-based answering, and high score tracking.

This internship gave me a very good opportunity to get exposure to real-world industrial problems and design and implement practical solutions using programming. It enhanced my understanding of Python programming, problem-solving, and project development. It was an overall great experience to have this internship.

1. Introduction

The purpose of this internship was to gain practical knowledge and hands-on experience in Python development. The project assigned during this internship was to develop a Quiz Game application that can interact with users, evaluate their responses, and provide performance feedback.

This project helped in understanding how real-world applications are designed and implemented using programming concepts.

2. Objectives of the Project

To develop a quiz application using Python

To implement file handling for storing questions

To design an interactive user interface

To evaluate user performance through scoring

To improve logical thinking and coding skills

3. Problem Statement

The objective of the project was to create a system that can:

Ask multiple-choice questions

Accept user input

Validate answers

Calculate score

Provide feedback to the user

4. Methodology

The project was developed using the following steps:

Understanding project requirements

Designing the quiz structure

Writing Python code for functionality

Implementing features like scoring and timer

Testing and debugging

Finalizing the project

5. Tools and Technologies Used

Programming Language: Python

Libraries Used: json, time, os

Editor: juoylab/Anaconda prompt

Platform: Windows

6. System Design

Input:

User selects category

User enters answers (A/B/C/D)

Process:

Load questions from JSON file

Display questions

Validate answers

Calculate score

Output:

Correct/Incorrect responses

Final score and percentage

Performance message

High score

7. Implementation

The project is implemented using modular programming:

Function to load questions from file

Function to display questions

Function to check answers

Function to calculate score

Function to display result

The quiz also includes:

Timer for each question

Category-based filtering

High score saving

8. Results

The developed Quiz Game successfully:

Displays questions correctly

Accepts user input

Evaluates answers accurately

Calculates score

Displays performance feedback

9. Challenges Faced

Designing quiz logic

Handling invalid inputs

Implementing file handling

Debugging program errors

10. Learning Outcomes

Improved Python programming skills

Learned file handling and data structures

Gained problem-solving ability

Understood real-world project development

11. Conclusion

The internship was very beneficial in gaining practical knowledge. The Quiz Game project helped in understanding programming concepts and applying them to real-world problems. It improved both technical and analytical skills.

12. Future Scope

Develop GUI using Tkinter

Add database support

Create online quiz system

Add leaderboard and timer improvements
